SERIES SUBMERSIBLE PUMPS

Piscinas Latino Americanas, C.A.

Equipiscinas, c.a

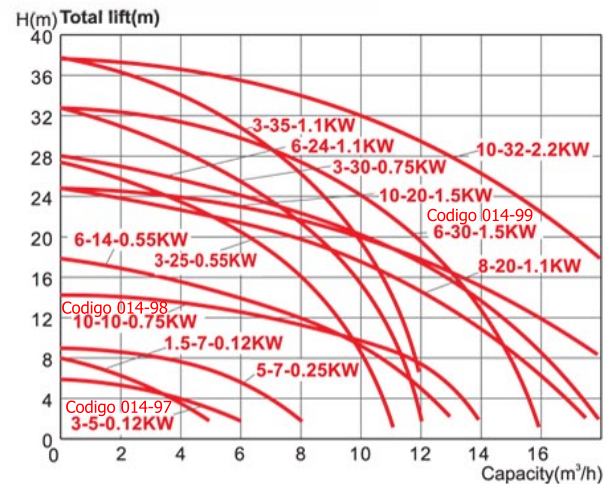

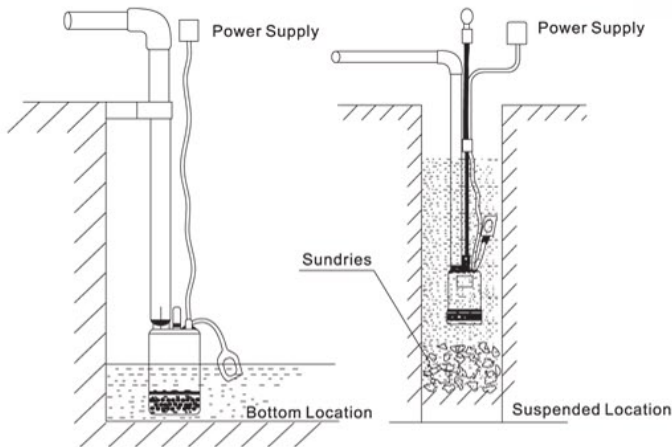

Pumps installation and applications

SGP series stainless steel submersible pumps can be used for garden watering, oxygenating of water cluster box or in supplying and draining Water for ordinary places and characterized by corrosion resistance, small volume, light weight and convenient operation. It is fitted with multiple water-outlet pipes, and self-regulated according to the requirements of its lift and flow, it can be used At a deadlock (it is fitted with a floating switch, so it is possible to carry out automatic control of start-stop action under no one's care) It's with single-phase capacitor A/C motor and with a thermal protector, it can be cut-off automatically in the case of overheating or over-current, thus ensuring safe and reliable running under worse Circumstances.

MATERIAL AND WORKING LIMITS

Pump body: Stainless steel
Bearing: SKF / NTN / NSK / C&U
Impeller: nylon
Insulation class: B/F
Mechanical seal: Stainless steel
Protection class: IP68
Shaft: 45#steel or stainless steel
Thermal protector
